e-HEALTH CONNECT

Healthcare made easier for you.

Introduction

Access to quality healthcare remains a major challenge, especially in public clinics and hospitals.

Patient often experience:

- Long waiting times
- Overcrowded facilities
- Limited access to Doctors

At the same time :

- Many qualified Doctors remain unemployed

This project introduces a digital solution to improve healthcare access and efficiency

Problem Statement

- Unemployment of Doctors.
- Inefficient patient management
- Slow recruitment process
- Long queues.

These challenges leads to poor service delivery and patient dissatisfaction.

Other factors include shrinking health budgets, high salary costs, and administrative failures in provincial departments.

While some doctors are hired, the issue continues with ongoing protests and reports from qualified doctors who are unable to find public sector posts.

Patients are also subjected to long waiting periods due to a shortage of doctors at hospitals, while qualified doctors are sitting at home.

Objectives

- The goal of this project is to reduce the rate of unemployment among doctors in South Africa and long waiting times at hospitals.
- Reduce waiting times in clinics and hospitals.
- Improve access to healthcare.
- Digitize and manage patient queues.

Proposed Solution

- Public hospitals or clinics will be assisted by achieving a queue-free environment for convenience.
- Unemployed doctors will have a platform for practice.

This system focuses on reducing queues and improving doctors availability.

Queue-Free System

- The system will:
  - Allow online booking of appointment.
  - Allocate time slots.
  - Manage real time queues.
  - Prioritize vulnerable patients.

This leads to:

- Reduced overcrowding.
- Faster service.
- Better patient experience.

How the system works

- User registers and logs in.
- Doctor sets availability.
- Patient view available doctors.
- Patient book appointment.
- Clinics manage queues digitally.

Monetization

- The system will generate income through:
  - Government partnership.
  - Subscription from Private hospitals.
  - Recruitment services.
  - Optional premium features.
- Basic services remain free for patients.

Benefits

Reduces waiting times.

Improves healthcare access.

Creates job opportunities.

Improves efficiency.

Supports national healthcare development

Conclusion

- This project uses technology to:
- Improve efficiency in clinics and hospitals.
- Provide equal access to healthcare
- It is sustainable and impactful solution for modern healthcare systems.
